Water-Jet Cutting / Inlays & Laser Etching / Engraving.

49 Newnan South Industrial Drive
Newnan, GA 30263

Tel: 770 253 6370
Fax: 770 253 6369

How to Care for Your New Stone Surface:

- 1) Avoid exposing your stone to oils, citric acids, oven cleaners, nail polish remover, etc. for long periods of time. If contact does occur, rinse off immediately with water.
- 2) Do not drop or pound heavy or sharp items on surfaces.
- 3) Cutting directly on tops with knives will dull your cutlery.
- 4) Avoid putting hot items on your tops. This may burn out your sealer.
- 5) Reseal counter surfaces as preventative maintenance.

How to Maintain Your New Stone Surface:

- 1) We recommend Dupont™ Stone Tech Professional Revitalizer for daily cleaning. However, you can use mild soapy water (without lotion or dye additives), non-abrasive, and ammonia free cleaners.
- 2) Try a mesh covered sponge with your favorite daily cleaner for more stubborn food residue.

Sealing Your Stone:

1. We recommend that you reseal your stone countertops once every year. Resealing your countertop will greatly improve your stone's ability to resist discoloration from stains.
2. We recommend a solvent based sealer, such as Dupont™ Stone Tech Professional Impregnator Pro or Dupont™ Stone Tech Professional BulletProof sealers.

We always stock Dupont™ Stone Tech Professional products at our shop location, give us a call to order.
